Programme description

Title of programme

Risk Assessment and Regulatory Toxicology (module of the Master of Advance Studies (MAS) in Toxicology)

Targeted Audience

Graduates with a master's degree in medicine, veterinary medicine, pharmacy, biochemistry, chemistry, biology, or a qualification which is judged equivalent.

Objectives

Students will learn methods of toxicological hazard and exposure assessment and how to apply them to risk characterisation. Risk management, risk perception and communication will also be discussed. In addition, experts from federal authorities and industry will provide insights into the role of safety assessment in the regulation of human and veterinary pharmaceuticals, pesticides, industrial chemicals, and nanomaterials.

Learning Outcomes

Understand and be able to apply methods of toxicological risk assessment and risk management in regulatory processes for human and veterinary pharmaceuticals, pesticides, cosmetics, food and food additives and industrial chemicals.

Partners

Swiss Center for Applied Human Toxicology (SCAHT), Centre de compétences en chimie et toxicologie analytiques (CCCTa), Swiss Society of Toxicology (SST), Centre de compétence suisse d'écotoxicologie appliquée (centre ecotox), University of Basel, University of Lausanne, University of Zürich.
